Linear Type (Exclusively Used to Detect the Angle of Vehicle Head Lights)

Exclusive for headlight angle detection with high accuracy and space-saving design

■ Typical Specifications

Items	Specifications
Rated Voltage	12V DC
Operating life	2N max.
Total resistance	100,000 cycles
Operating temperature range	-40℃ to +105℃

Product Line

Travel			Linearity	Minimum ord	er unit (pcs.)	Model No.	Drawing

Notes

- 1. The RD7 series are used to detect vehicle headlight angles.
- 2. Indicates applicability to all products in the series.

Resistive Position Sensors / Product Specifications

■ Method for Regulating the Linearity

Resistive Position Sensors / Measurement and Test Methods

Resistive Position Sensor

(Total Resistance)

Unless otherwise specified, total resistance is the resistance measured between resistor terminals 1 and 3.

(Rating Voltage)

The rating voltage corresponding to the rated power shall be determined by the following equation. When the resulting rated voltage exceeds the maximum operating voltage of a specific resistor, the maximum operating voltage shall be taken as the rated voltage.

E=√P·R
E: Rated voltage (V)
P: Rated power (W)
R: Total nominal resistance (Ω)

Resistive Position Sensors / Soldering Conditions

Reference for Manual Soldering

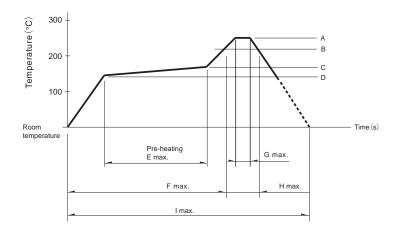

Series	Tip temperature	Soldering time	
RDC50, RDC90	350±5℃	3 ⁺¹ ₀ s	
RDC10, RD7	350°C max.	3s max.	

■ Reference for Dip Soldering

0 :	Preheating		Dip so	No. of solders	
Series	Soldering surface temperature Heating time		Soldering temperature	Soldering time	
RDC501, RDC502	100 to 150℃	1 min. max.	260±5℃	10±1s	1 time
RD7	100°C max.	1 min. max.	260℃ max.	5s max.	1 time

■ Example of Reflow Soldering Condition

- 1. Cleaning sensors should not be attempted.
- 2. Type of solder to be used Use cream solder that contains 10 to 15 wt % flux.
- 3. Number of solder applications apply solder only once
- 4. Recommended reflow conditions

Series	А	В	С	D	Е	F	G	Н	I	No. of reflows
RDC503 RDC506	250℃	230℃	180℃	150℃	2 min.	_	5s	40s	4 min.	1 time
RDC90	255℃	230℃	_	_	_	2 min.	10s	1 min.	4 min.	1 time

Notes

- 1. When using an infrared reflow oven, solder may not always be applied as intended.

 Be sure to use a hot air reflow oven or a type that uses infrared rays in combination with hot air.
- 2. The temperatures given above are the maximum temperatures at the terminals of the sensor when employing a hot air reflow method. The temperature of the PC board and the surface temperature of the sensor may vary greatly depending on the PC board material, its size and thickness. Ensure that the surface temperature of the sensor does not rise to 250°C or greater.
- 3. Conditions vary to some extent depending on the type of reflow bath used. Be sure to give due consideration to this prior to use.
