

DIO1269

Low-Voltage Dual-SPDT (1Ω) Analog Switch with Negative Swing Audio Capability

Features

- 1Ω Typical On Resistance (R_{ON}) for +3.0V Supply
- 0.5Ω R_{ON} Flatness for +3.0V Supply
- -3dB Bandwidth: 180MHz
- Low- I_{CCT} Current Over an Expanded Control Input Range
- Green Packaged in DQFN-10
- Power-Off Protection on Common Ports
- Broad VCC Operating Range: 2.7V to 4.5V

Applications

- Cell Phone, and Digital Camera
- PDA , and Notebook
- LCD Monitor
- TV, and Set-Top Box

Descriptions

The DIO1269 is a high-performance, dual Single-Pole Double-Throw (SPDT) analog switch with negative swing audio capability. The DIO1269 features ultra-low R_{ON} of 1Ω (typical) at 3.0V VCC. The DIO1269 operates over a wide VCC range of 2.7V to 4.5V, is fabricated with sub-micron CMOS technology to achieve fast switching speeds, and is designed for break-before-make operation. The select input is TTL-level compatible.

The DIO1269 features very low quiescent current even when the control voltage is lower than the VCC supply. This feature suits mobile handset applications by allowing direct interface with baseband processor general-purpose I/Os with minimal battery consumption.

Absolute Maximum Ratings

Stresses beyond those listed under "Absolute Maximum Rating" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other condition beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Parameter		Rating	Unit
Supply Voltage (VCC)		-0.5 to 5.5	V
Switch I/O Voltage (NC, NO, COM Pins)		-2 to (V ₊) +0.3	V
Control Input Voltage (S1,S2 Pins)		-0.5 to (V ₊) +0.3	V
Switch I/O Current (Continuous)		350	mA
Peak Switch Current (Pulsed at 1ms Duration, <10 Duty Cycle)		500	mA
Storage Temperature Range (T _{STG})		-65 to 150	°C
Junction Temperature		150	°C
Lead Temperature Range		260	°C
MSL (Moisture Sensitivity Level, JEDEC J-STD-020A)		1	
ESD	HBM, JEDEC: JESD22-A114	8	kV
	CDM, JEDEC : JESD22-C101	2	

Note: Input and output negative ratings may be exceeded if input and output diode current ratings are observed.

Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation to ensure optimal performance to the datasheet specifications. DIOO does not recommend exceeding them or designing to Absolute Maximum Ratings.

Parameter		Rating	Unit
Supply Voltage		2.7 to 4.5	V
Control Input Voltage (S1,S2 Pins)		0 to VCC	V
Switch I/O Voltage (NC, NO, COM Pins)		-2 to VCC	V
Operating Temperature Range		-40 to 85	°C

Note: For 4.5V operation, SEL frequency (pins S1 & S2) should not exceed 100Hz and 50ns edge rate.
