General Description

The HMC356LP3 & HMC356LP3E are high dynamic range GaAs PHEMT MMIC Low Noise Amplifiers is ideal for GSM & CDMA cellular basestation and Mobile Radio front-end receivers operating between 350 and 550 MHz. This LNA has been optimized to provide 1.0 dB noise figure, 17 dB gain and +38 dBm output IP3 from a single supply of +5V @ 104 mA. Input and output return losses are 15 dB typical, with the LNA requiring only four external components to optimize the RF input match, RF ground and DC bias. For applications which require improved noise figure, please see the HMC616LP3(E).

Pin Descriptions

Pin Number	Function	Description	Interface Schematic
1, 5, 8, 9, 10, 12, 13, 14	N/C	No connection necessary. These pins may be connected to RF/DC ground.	
2, 4, 6, 16	GND	These pins and package ground paddle must be connected to RF/DC ground.	
3	RFIN	This pin is matched to 50 Ohms with a 51 nH inductor to ground. See Application Circuit.	
7	ACG	AC Ground - An external capacitor of 0.01μF to ground is required for low frequency bypassing. See Application Circuit for further details.	
11	RFOUT	This pin is AC coupled and matched to 50 Ohms.	
15	Vdd	Power supply voltage. Choke inductor and bypass capacitor are required. See application circuit.	

Application & Evaluation PCB Circuit

Note 1: Choose value of capacitor C1 for low frequency bypassing. A 0.01 μF ±10% capacitor is recommended.

Note 2: L1, L2 and C1 should be located as close to pins as possible.

[2] Circuit Board Material: Rogers 4350

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
