

ITR20002

Features

- Cut-off visible wavelength $\lambda_p=840\text{nm}$
- Fast response time
- High sensitivity
- Pb free
- High analytic

Description

The **ITR20002** consist of an infrared emitting diode and an NPN silicon phototransistor, encased side-by-side on converging optical axis in a black thermoplastic housing. The phototransistor receives radiation from the IR only. This is the normal situation. But when an object is in between, phototransistor could not receive the radiation.

Applications

- Mouse Copier
- Floppy disk driver
- Non-contact Switching
- For Direct PC Board
