

# RFSA3713

## 5MHz to 6000MHz, Digital Step Attenuator

The RFMD's RFSA3713 is a 7-bit digital step attenuator (DSA) that features high linearity over the entire 31.75dB gain control range with 0.25dB steps. The RFSA3713 uses serial control interface. The RFSA3713 has a low insertion loss of 1.4dB at 2GHz. Patent pending circuit architecture provides overshoot-free transient switching performance. External address pins allow up to eight DSAs to be controlled on a single bus. The RFSA3713 is available in a 3mm x 3mm QFN package.

Functional Block Diagram

Package: QFN, 16-pin,  
3.0mm x 3.0mm x 0.85mm

### Features

- 7-Bit, 31.75dB Range, 0.25dB Step
- Patent Pending Circuit Architecture
- Overshoot-free Transient Switching Performance
- Frequency Range 5MHz to 6000MHz
- High Linearity, IIP3 >55dBm
- Serial Control Interface
- Fast Switching Speed, <120nsec Typical
- Serial Addressable Supports Up to Eight Addresses
- Single Supply 3V to 5V Operation
- RF Pins Have No DC Voltage, Can be DC Grounded Externally
- Power-up Default Setting Is Maximum Attenuation

### Applications

- 2G through 4G Base Stations
- Point-to-Point
- WiMax/WiFi
- Test Equipment

### Ordering Information

|                 |  |
|-----------------|--|
| RFSA3713SQ      | Sample bag with 25 pieces                    |
| RFSA3713SR      | 7" Reel with 100 pieces                      |
| RFSA3713TR7     | 7" Reel with 2500 pieces                     |
| RFSA3713PCK-410 | 5MHz to 6000MHz PCBA with 5-piece sample bag |

## Absolute Maximum Ratings

| Parameter  | Rating           | Unit |
|--|------------------|------|
| Supply Voltage ( $V_{DD}$ )  | -0.5 to +6.0     | V    |
| All Other DC and Logic Pins (Supply Voltage Must Be Applied Prior to Any Other Pin Voltages) | -0.5 to $V_{DD}$ | V    |
| Maximum Input Power at RFIN Pin at 85°C Case Temperature                                     | +30              | dBm  |
| Maximum Input Power at RFOUT Pin at 85°C Case Temperature                                    | +27              | dBm  |
| Storage Temperature Range  | -40 to +150      | °C   |
| ESD Rating - Human Body Model (HBM)  | 1000             | V    |
| Moisture Sensitivity Level   | MSL1             |      |

**Caution!** ESD sensitive device.

RFMD Green: RoHS status based on EU Directive 2011/65/EU (at time of this document revision), halogen free per IEC 61249-2-21, < 1000ppm each of antimony trioxide in polymeric materials and red phosphorus as a flame retardant, and <2% antimony in solder.

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability. Specified typical performance or functional operation of the device under Absolute Maximum Rating conditions is not implied.

## Recommended Operating Condition

| Parameter   | Specification |     |      | Unit |
|---|---------------|-----|------|------|
|   | Min           | Typ | Max  |      |
| Operating Temperature Range (RF Input Power Handling Derates above +85°C) | -40           |     | +105 | °C   |
| Operating Junction Temperature  |               |     | 125  | °C   |
| Supply Voltage  | 2.7           |     | 5.5  | V    |

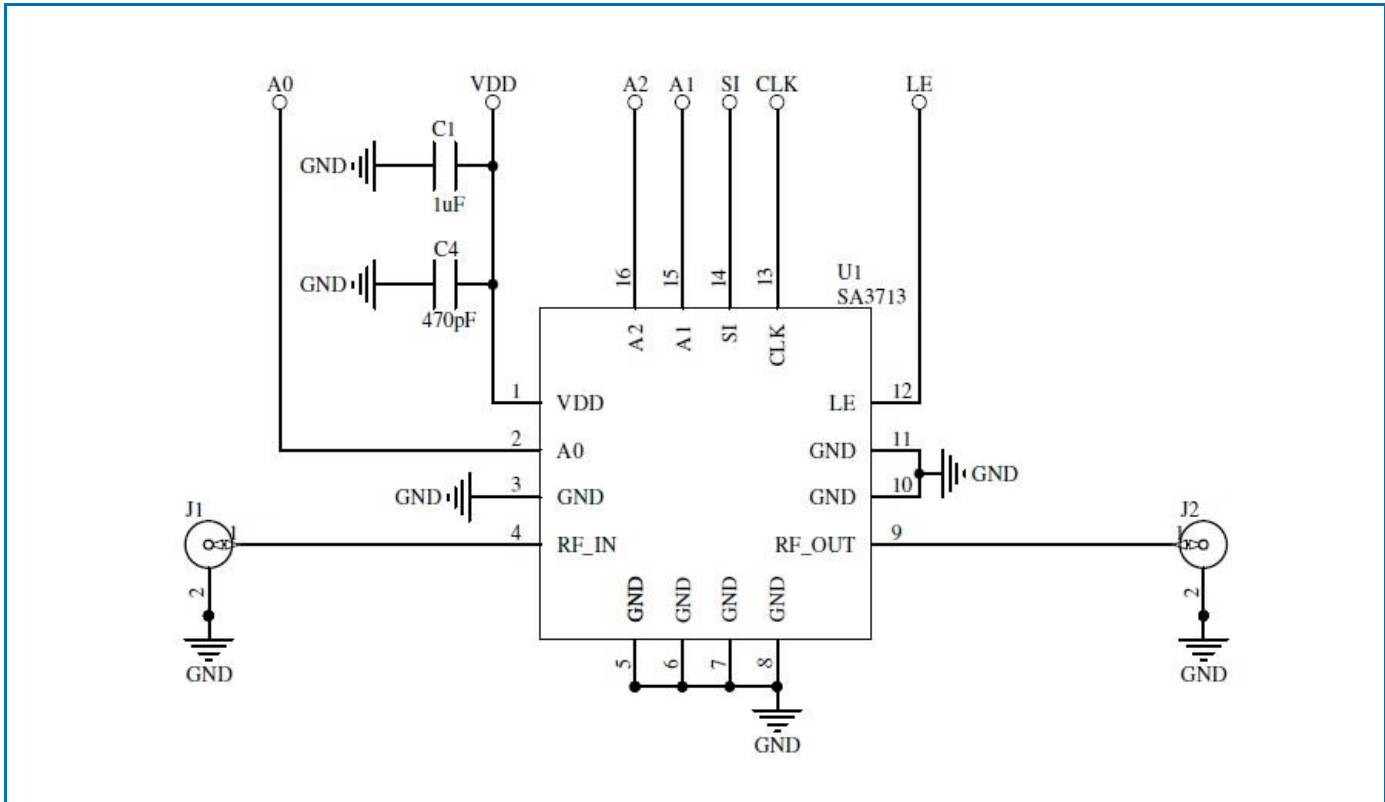

## Nominal Operating Parameters

| Parameter                   | Specification |       |      | Unit | Condition  |
|-----------------------------|---------------|-------|------|------|--|
|                             | Min           | Typ   | Max  |      |  |
| <b>General Performance</b>  |               |       |      |      |  |
| Supply Current              |               | 180   |      | μA   | Steady state operation, current draw during attenuation state transitions is higher. |
| Thermal Resistance          |               | 55    |      | °C/W | At maximum attenuation state with RF power applied to the RFIN pin.                  |
| RF Input Power at RFIN Pin  |               |       | 27   | dBm  | Continuous operation at +85°C case temperature                                       |
| RF Input Power at RFOUT Pin |               |       | 20   | dBm  |  |
| <b>RF Performance</b>       |               |       |      |      |  |
| Frequency Range             | 5             |       | 6000 | MHz  |  |
| Insertion Loss              |               | 1.4   |      | dB   | 2000MHz, 0dB attenuation   |
| Attenuation Range           |               | 31.75 |      | dB   | 0.25dB step size   |
| Absolute Attenuation Error  | ±(0.2 + 4%)   |       |      | dB   |  |
| Input IP3                   |               | 55    |      | dBm  |  |
| Input P0.1dB                |               | 30    |      | dBm  |  |
| Return Loss                 |               | 15    |      | dB   |  |
| Input and Output Impedance  |               | 50    |      | Ω    |  |

| Parameter                         | Specification |     |      | Unit | Condition                 |
|-----------------------------------|---------------|-----|------|------|---------------------------|
|                                   | Min           | Typ | Max  |      |                           |
| <b>RF Performance – Continued</b> |               |     |      |      |                           |
| Switching Speed                   |               | 120 |      | nsec | 50% control to 10%/90% RF |
| Successive Step Phase Delta       |               | 2   |      | Deg  | 2000MHz                   |
| <b>Control</b>                    |               |     |      |      |                           |
| Digital Logic Low                 |               |     | 0.63 | V    |                           |
| Digital Logic High                | 1.17          |     |      | V    |                           |

Note: Typical performance at these conditions: Temp = +25°C, 2000MHz, 5V Supply Voltage

Typical Application Schematic

Typical Performance:

Typical Performance:

Note: Attenuator remains monotonic if step error is less than +0.25dB.

### Notes:

1. M1 should be mounted into P2 with respect to the Pin 1 alignment of M1 and P2.
2. Install S1-S4 into P3 as indicated on the Evaluation Board Assembly Drawing.

Evaluation Board Assembly Drawing

## Evaluation Board Jumper Programming

| Jumpers | Connector | Signal        | Position | U1 Connection | Comment          |
|---------|-----------|---------------|----------|---------------|------------------|
| S1      | P3        | Logic Voltage | <b>0</b> | VDD (From P1) |                  |
|         |           |               | 1        | VIO (From P4) |                  |
| S2      |           | A0            | <b>0</b> | GND           | External Address |
|         |           |               | 1        | U1_VDD        |                  |
| S3      |           | A1            | <b>0</b> | GND           | External Address |
|         |           |               | 1        | U1_VDD        |                  |
| S4      |           | A2            | <b>0</b> | GND           | External Address |
|         |           |               | 1        | U1_VDD        |                  |

Note: Default jumper settings are **BOLD**.

## Evaluation Board Programming Using USB Interface

### Serial Addressable Mode

All programming jumpers on the evaluation board are set to the default values indicated in the table. Refer to the Control Bit Generator (CBG) Software Reference Manual for detailed instructions on how to setup the software for use. Apply the supply voltage to P1. Select 'RFSA3713' from the RFMD parts list of the CBG user interface. Set the attenuation value using the CBG user interface. The attenuator is set to the desired state and measurement can be taken. Note that the external address bits must all be set to '0' when using the USB interface as the CGB software does not have the capability to set the external address in the serial data stream at this time.

## Evaluation Board Programming Using External Bus

### Serial Addressable Mode

The configuration allows the user to control the attenuator through the P4 connector using an external harness. Remove the USB interface board if it is currently installed on the evaluation board. Connect a user-supplied harness to the P4 connector. Note that the top row of P4 contains the serial bus signals and the bottom row is ground. Programming jumper S1 is set to '0'. External address jumpers S2 through S4 can be set to any value desired by the user. Apply the supply voltage P1. Send the appropriate signals onto the serial bus lines in accordance with the Serial Mode Timing Diagram. The attenuator is set to the desired state and measurements can be taken.

## Default Power-up State

The default attenuation state is maximum (31.75dB) when supply voltage is applied to the attenuator. The LE signal must be held to logic '0' during power up.

## Pin Names and Descriptions

| Pin | Name  | Description  |
|-----|-------|--|
| 1   | VDD   | Supply Voltage   |
| 2   | A0    | A0 External Address Pin  |
| 3   | GND   | Ground Pin   |
| 4   | RFIN  | RF Input Pin<br>Incident RF power must enter this pin for rated thermal performance and reliability<br>Do not apply DC power to this pin. Pin may be DC grounded externally and is grounded thru resistors internal to the part. |
| 5   | GND   | Ground Pin   |
| 6   | GND   | Ground Pin   |
| 7   | GND   | Ground Pin   |
| 8   | GND   | Ground Pin   |
| 9   | RFOUT | RF Output Pin; Do not apply DC power to this pin. Pin may be DC grounded externally and is grounded thru resistors internal to the part.   |
| 10  | GND   | Ground Pin   |
| 11  | GND   | Ground Pin   |
| 12  | LE    | Latch Enable<br>The leading edge of signal on LE causes the attenuator to change state   |
| 13  | CLK   | Serial Clock Input   |
| 14  | SI    | Serial data Input  |
| 15  | A1    | A1 External Address Pin  |
| 16  | A2    | A2 External Address Pin  |
