OUTLINE DIMENSION:

Figure 1 is a typical reflow profile graph. The Y-axis represents Temperature in degrees Celsius (°C), with marked values at 25°C, 150°C, 180°C, 230°C, and 260°C. The X-axis represents Time in seconds (s). The profile is divided into three main phases: Pre-Heat, Reflow, and Cool. The Pre-Heat phase starts at 25°C and ramps up to 150°C, with a time interval of 60~120s. The Reflow phase starts at 150°C, ramps up to 260°C, and then holds at 260°C for 30~40s. A note indicates '10s max. 1 time at +260°C±5°C'. The Cool phase starts at 260°C and ramps down to 25°C, with a time interval of 60~90s.
