EMI FILTERING & RF INDUCTORS

About Laird

Laird is a global technology business focused on enabling wireless communication and smart systems, and providing components and systems that protect electronics. Laird operates through two divisions, Wireless Systems and Performance Materials. Wireless Systems solutions include antenna systems, embedded wireless modules, telematics products and wireless automation and control solutions. Performance Materials solutions include electromagnetic interference shielding, thermal management and signal integrity products. As a leader in the design, supply and support of innovative technology, our products allow people, organisations, machines and applications to connect effectively, helping to build a world where smart technology transforms the way of life. Custom products are supplied to major sectors of the electronics industry including the handset, telecommunications, IT, automotive, public safety, consumer, medical, rail, mining and industrial markets. Providing value and differentiation to our customers through innovation, reliable fulfilment and speed, Laird PLC is listed and headquartered in London, and employs over 9,000 people in more than 58 facilities located in 18 countries.

Pb RoHS

All parts listed in this catalog are lead free and RoHS compliant.

NOTICE

Nomenclature Explanation

PART NUMBERING SYSTEM

HZ	0402	A	601	R	-10
PRODUCT SERIES CODE	EIA SIZE CODE	RATED CURRENT CODE	IMPEDANCE (Z) OR INDUCTANCE (L)	PACKING CODE	ADDITIONAL DESCRIPTION
HI = High Current Chip Beads (≥3,000 mA) **MI** = Mid Current Chip Beads (≥1,000 mA to <3,000 mA) **LI** = Low Current Chip Beads (<1,000 mA, <400 Ω Z) **HZ** = High Impedance Chip Beads (<1,000 mA, >400 Ω Z) **HF** = High Frequency Chip Beads **LF** = Low Frequency Chip Beads **HR** = High Bias Retention Chip Beads (>3,000 mA) **CC** = CAN-Bus Common Mode Chokes **CM** = Common Mode Chokes **CMX** = Wire-Wound Power Common Mode Chokes **CF** = Small Size (0805, 0504) Monolithic Common Mode Chokes **DA** = Multilines Array Chip Arrays **IC** = Ferrite Chip Inductors **CCI** = Ceramic Chip Inductors **CPI** = Multilayer Power Chip Inductors	0402 2545 0504 2722 0603 3032 0805 3312 0806 3322 1008 3421 1206 3822 1210 4440 1211 4545 1616 4732 1612 5022 1806 5441 1812 6032 1922 2021 2220 2520	A < 100 mA B = 200 mA C = 300 mA D = 400 mA E = 500 mA F = 600 mA G = 700 mA H = 800 mA I = 900 mA J = 1,000 mA K = 1,500 mA L = 2,000 mA M = 2,500 mA N = 3,000 mA O = 3,500 mA P = 4,000 mA Q = 4,500 mA R = 5,000 mA S = 5,500 mA T = 6,000 mA U = 7,000 mA V = 8,000 mA W = 9,000 mA X = 10,000 mA Y = 15,000 mA Z ≥ 20,000 mA	First two numbers are Significant Digits The last number indicates how many zeros are added to the significant digits. Impedance Examples: 100 = 10 OHMS 101 = 100 OHMS 102 = 1,000 OHMS 202 = 2,000 OHMS 060 = 6 OHMS Examples: (For IC Series) 470 = 47 nH 471 = 470 nH 472 = 4,700 nH 473 = 47,000 nH Examples: (For CCI series) 0N3 = 0.3 nH 1N2 = 1.2 nH 12N = 12 nH R12 = 120 nH R22 = 220 nH Examples: (For CPI series) R47 = 0.47 uH 1R0 = 1.0 uH 4R7 = 4.7 uH Examples: (For CMX series) 680 = 68 uH 181 = 180 uH 132 = 1300 uH	B: Bulk Standard Thru-Hole Packaging R : Tape&Reel Standard SMT Package	-10 = Lead Free Standard Catalog Part -11 to -99 = Non-Standard or Custom Part -1☐ = Tolerance Code

PART NUMBERING SYSTEM

29	F	0818	-1	S	R	-10
MATERIAL TYPE	PRODUCT TYPE CODE	PART SIZE CODE	MINOR DIMENSION CODE	BOARD MOUNTING SYTLE	PACKAGING CODE	ADDITIONAL DESCRIPTION
28 & 29 = Broad Band Material 35 = Low Freq. Material	C = Choke L = Axial Leaded Bead F = Assembled Part	Unique Part Identifier or Significant Dimension	Height or Length Variation	S = Surface Mount T= Thru-Hole	O = Bulk Standard R = Tape & Reel Standard SMT Package	-10 = Lead Free Standard Catalog Part -11 to -99 = Non Standard or Custom Part

TEST CONDITIONS

Operation temperature: -40°C ~ +125°C (If no parts are specifically defined)

Visit **www.lairdtech.com** for additional and the most up-to-date information and for other board level part families not included in this catalog. All data charts are available by contacting your local Laird office.

A revolutionary new SPICE model for EMI ferrite chip beads in now available from Laird. This new design aid includes the de-rating effects of DC bias currents providing much greater accuracy for better designs the first time. This chip bead SPICE model is available by contacting your local Laird office.

Note: Most current ratings (I MAX) are based upon a 40°C temperature rise during continuous operation. Parts have no polarity.

CHIP BEADS

FEATURES

- Up to 10 Amps (I MAX) continuous operating capability
- Monolithic construction with small footprint and high reliability
- Excellent retention under bias
- Economical
- Broad range of sizes (from EIA 0201 up to 3312)
- For power line, low frequency and high frequency signal lines

BEAD ASSEMBLIES

FEATURES

- 10 Amps continuous operating current capability
- Very low RDC
- Broadband (28F) and (35F) parts available
- Lead free and RoHS compliant

Refer to part print for specific dimensions. Parts have no polarity.

EXPLANATION

Laird common mode chokes are the ideal components for EMI filtering of power and signal lines. These components withstand high DC currents without degradation of filtering performance that can occur with differential mode filters like small chip beads. Stable common mode chokes allow most signals to pass unaffected, yet filter the noise (EMI) from these circuits.

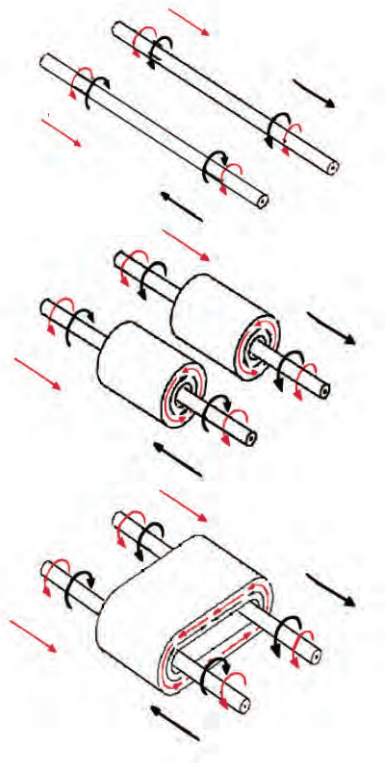
Switch mode power supplies are required for most advanced electronics because harmonics of the switch mode power supply can escape the power supply as EMI. The power delivery circuit often creates opportunities for unintended common mode current loops to form in the end product, even when using a "certified" or "regulation compliant" power supply. Installation of a common mode choke to the supply output can significantly reduce this common mode energy flow and help insure product performance and EMI regulatory compliance.

Small ferrite chip beads or inductors are degraded by the power supply output. However, common mode chokes continue their high performance regardless of the high power currents that might flow or spike in the circuit.

Modern systems are frequently an interconnection of functional blocks and connections made by cables or wiring harnesses. These interconnections often present the opportunity for common mode current loops between devices that can lead to EMI regulatory failure. The addition of a common mode choke before the connector filters these common mode currents while allowing the desired signals to pass unaffected. The result is effective communication between devices, reliable product and system operation and product EMI regulatory compliance.

Most well-designed power and signal circuits present no EMI caused from intended currents. As an example, at 30 MHz a pair of traces or wires 1 m long, separated by 1.3 mm, require over 20 mA differential current imbalance to exceed 100 µV/m radiation 3 meters away. However, unintended, unforeseen common mode currents can exceed 100 µV/m radiation with only 8 µA common mode current flow! Suppression of these tiny common mode currents is often crucial to assuring EMI regulatory compliance and reliable product performance. Ferrite common mode chokes operate by acting on the magnetic fields surrounding a pair of conductors.

Black arrows represent differential (normal) mode. Red arrows represent common mode.



Two conductors used in a standard "differential" transmission circuit create magnetic fields surrounding the conductors. These magnetic fields flow around the conductors in the directions depicted by the black arrows.

Likewise, common mode currents generate magnetic fields surrounding the conductors. The red arrows depict the common mode current path and the associated flux paths around the wires.

The same two wires shown above have been fitted above with two separate ferrite EMI cores in a differential-mode configuration with one core per line. In this application, each core must contain the total magnetic flux resulting from both the differential mode (intended) current and the common mode (unintended) by the intended current. Differential mode filters (like small chip beads) are not stable under significant load.

The same two wires have now been fitted with a ferrite EMI core in a common mode configuration; a single core with both lines through a common opening in the core. The differential mode (black) fields in the core are now equal and opposite, which yields a net flux seen by the core of approximately zero. Saturation is no longer an issue, and a much smaller ferrite core/choke can be used. The field from the common mode noise (red arrows) is additive and is the only remaining flux to be inflected by the core. The common mode choke configuration applies to both cable cores and board level components. Common mode chokes are stable under load.

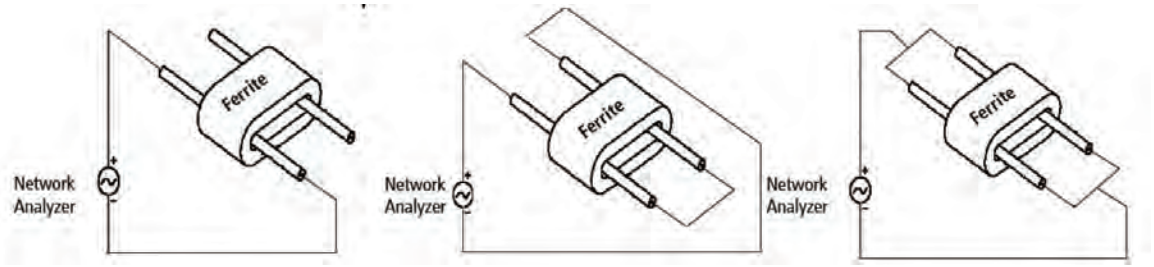
IMPEDANCE TEST FOR COMMON MODE CHOKES



Open Mode **Normal/Differential Mode** **Common Mode**

Open-Mode Impedance Measurement -
The open-mode impedance characterizes the impedance of only a single conductor in the ferrite common mode choke.

Normal (Differential) Mode Impedance Measurement
The normal mode impedance characterizes the impedance presented by the common mode choke to the normal (differential) signals present in the circuit. The test circuit represents the forward and return paths through the device.

Common Mode Impedance Measurement - The common mode impedance characterizes the impedance presented by the choke to the unintended common mode currents that might flow in the circuit and cause EMI failures. Since this current flows in both conductors, it is necessary to short the conductors on each side of the choke so that test current flows equally through both conductors.

FEATURES

- Wire wound SMT and through hole structure rated current up to 75 Amps
- Low DCR with small package
- Stable performance under load bias
- Excellent impedance vs frequency feature
- Small size and high reliability
- For power, low frequency and high frequency signal lines
- For USB, HDMI, 1394, DVI, S-ATA, LVDS signal line applications
- Suitable for power saving especially for portable application

SERIES

FEATURES

- Accurate current matching capability over a broad range of inductance values
- Sector wound coils at 25 & 51 µH to filter differential mode noise from the data signal.
- Low distortion
- Custom designs possible
- Open bottom case construction
- Small (1812) size parts are so available
- Surface Mount

EXPLANATION OF PASSES & TURNS

Laird multi-choke arrays can be electrically connected in the PC board to increase effective impedance. When the PCB circuits are configured, as shown above, such that individual side-by-side chokes within one array part are connected in series, the impedance is increased by a factor of the number of passes through the part. Since internal construction of Laird ferrite common mode chokes varies, Laird refers to this special installation configuration using the different terms of "pass" (additive) or "turn" (multiplicative).

When the term "pass" is used to describe series connections through a choke, each additional pass increases the impedance (Z) in proportion to the number of series PCB connections applied. Each additional "pass" adds a choke in series. If needed, it's an optional effective method of increasing impedance with an array.

When the term "turn" is used to describe series connection through a choke, each additional turn increases the impedance in proportion to the square of the number of series PCB connections applied. Each turn multiplies impedance.

Parts have no polarity.

CHOKES

CMX 1211 Series

FEATURES

- Small size with high current
- Stable performance under load bias and high reliability
- High suppression of asymmetric interferences at both low and high frequency
- SMT Type with less height
- Operation temperature: -40°C to 125°C (Including self-heating)
- Custom designs on request

APPLICATIONS

- Interferences suppression of common mode noise
- Power line filter
- Switch-mode power supplies

FEATURES

- Differential mode EMI filter, high current, thru-hole type
- Up to 5 Amps continuous operation current
- Low DCR
- For power lines application for LCD-TV, automotive, telecom, test equipment etc.

INDUCTORS

FEATURES

RoHS

- Monolithic construction, small size
- High reliability
- Economical
- Broadband and high frequency available
- For RF and wireless communication, computers, telecommunications, automotive electronics etc.

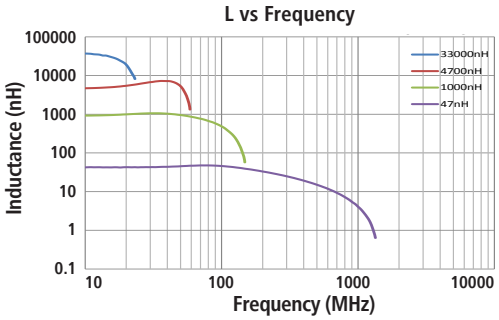
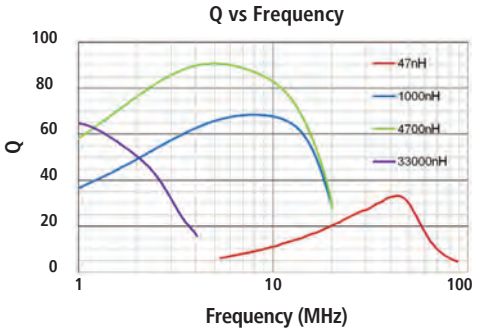
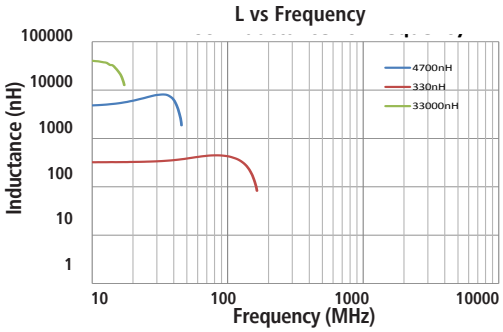
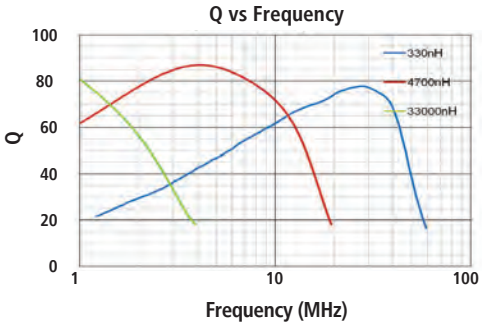
0805 Characteristics





1206 Characteristics





INDUCTORS

FEATURES

- Small size (L x W : EIA 0805, 0806 and 1008) with max 1.0 mm in thickness
- Lead-free product and support lead-free soldering
- Applications: mainly for DC-DC converters and power modules. Compact electrical instruments like DSCs, DVCs, PDA, DVD and HDDs, cellular phones
- Operation temperature: -55°C ~ +125°C
- Rated Current Definition: Temperature rise to 40°C max.
