Description

The LDK130xx low drop voltage regulator provides 300 mA of maximum current from an input supply voltage in the range of 1.9 V to 5.5 V, with a typical dropout voltage of 100 mV.

It is stabilized with a ceramic capacitor on the output.

The very low drop voltage, low quiescent current and low noise features make it suitable for low power battery-powered applications.

An enable logic control function puts the LDK130xx in shutdown mode allowing a total current consumption lower than 1 μ A.

The device also includes a short-circuit constant current limiting and thermal protection.
