

256-TAPS DUAL CHANNEL DIGITAL POTENTIOMETER WITH NON-VOLATILE MEMORY

Check for Samples: [TPL0102](#)

FEATURES

- Dual Channel, 256-Position Resolution
- Non-volatile Memory Stores Wiper Settings
- 2mm x 2mm, 14-pin MicroQFN or 14-pin TSSOP Packages
- 100 k Ω End-to-End Resistance (TPL0102-100)
- Fast Power-up Response Time to Wiper Setting: <100 μ s
- ± 0.5 LSB INL, ± 0.25 LSB DNL (Voltage-Divider Mode)
- 4 ppm/ $^{\circ}$ C Ratiometric Temperature Coefficient
- I²C-compatible Serial Interface
- 2.7 V to 5.5 V Single-Supply Operation
- ± 2.25 V to ± 2.75 V Dual-Supply Operation
- Operating Temperature Range From -40 $^{\circ}$ C to +85 $^{\circ}$ C
- ESD Performance Tested Per JESD 22
 - 2000-V Human Body Model (A114-B, Class II)

APPLICATIONS

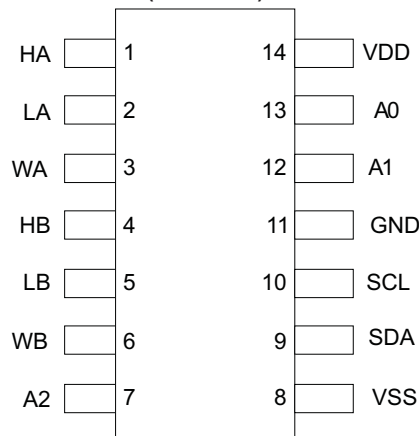

- Adjustable Gain Amplifiers and Offset Trimming
- Adjustable Power Supplies
- Precision Calibration of Set Point Thresholds
- Sensor Trimming and Calibration
- Mechanical Potentiometer Replacement

DESCRIPTION

The TPL0102 is a two channel, linear-taper digital potentiometer with 256 wiper positions. Each potentiometer can be used as a three-terminal potentiometer or as a two-terminal rheostat. The TPL0102-100 has an end-to-end resistance of 100k Ω .

The TPL0102 has non-volatile memory (EEPROM) which can be used to store the wiper position. The internal registers of the TPL0102 can be accessed using the I²C interface.

The TPL0102 is available in a 14-pin MicroQFN and 14-pin TSSOP package with a specified temperature range of -40 $^{\circ}$ C to +85 $^{\circ}$ C.

		RUC package	216.7	
T _{stg}	Storage temperature range	-65	150	°C

- (1) Stresses above these ratings may cause permanent damage. Exposure to absolute maximum conditions for extended periods may degrade device reliability. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those specified is not implied.
- (2) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum.
- (3) All voltages are with respect to ground, unless otherwise specified.
- (4) The package thermal impedance is calculated in accordance with JESD 51-7.

ELECTRICAL CHARACTERISTICS

V_{DD} = 2.7V to 5.5V, V_{SS} = 0V, V_H = V_{DD}, V_L = GND, T_A = -40°C to 85°C (unless otherwise noted). Typical values are at V_{DD} = 5V, T_A = 25°C (unless otherwise noted).

NAME	SIZE (BITS)	DESCRIPTION
VOL	1	0: Non-volatile registers (IVRA, IVRB) are accessible. Value written to IVRi register is also written to the corresponding WRi. 1: Only Volatile Registers (WRi) are accessible.
$\overline{\text{SHDN}}$	1	0: Shut-down mode is enabled. Potentiometers are in shut-down mode. (see Figure 2) 1: Shut-down mode is disabled
WIP (Read-only bit)	1	0: Non-volatile write operation is not in progress 1: Non-volatile write operation is in progress (it is not possible to write to the WRi or ACR while WIP = 1)

Figure 2. Potentiometer in Shut-Down Mode

PRINCIPLES OF OPERATION

The TPL0102 is a two channel, linear-taper digital potentiometer with 256 wiper positions. Each potentiometer can be used as a three-terminal potentiometer or as a two-terminal rheostat. The TPL0102-100 has an end-to-end resistance of 100k Ω .

The TPL0102 has non-volatile memory (EEPROM) which can be used to store the wiper position. When the device is powered down, the last value stored in the IVR register will be maintained in the non-volatile memory. When power is restored, the contents of the IVR register are recalled and loaded into the corresponding WR register to set the wipers to the initial position. The internal registers of the TPL0102 can be accessed using the I²C interface.

The position of the wiper terminal is controlled by the value in the WR 8-bit register. When the WR contains all zeroes, the wiper terminal W is closest to its L (Low) terminal. As the value of the WR increases from all zeroes to all ones (255 decimal), the wiper moves monotonically from the position closest to L to the position closest to H. At the same time, the resistance between W and L increases monotonically, whereas the resistance between W and H decreases monotonically.

Potentiometer Pin Description

HA,HB,LA,LB

The high (HA, HB) and low (LA, LB) terminals of the TPL0102 are equivalent to the fixed terminals of a mechanical potentiometer. The H and L terminals do not have any polarity restrictions, i.e. H can be at a higher voltage than L, or L can be at a higher voltage than H. The WA and WB terminals are the wipers and equivalent to the movable terminal of a mechanical potentiometer. The position of the wiper is set using the WR register. With the WR register set to 255 decimal, the wiper is closest to the H terminal, and with the WR register set to 0, the wiper is closest to the L terminal.

SDA, SCL

SDA is a bi-directional serial data input/output pin for I²C communication. SDA is an open drain output and requires an external pull-up resistor.

SCL is the serial clock input for I²C communication. SCL requires an external pull-up resistor.

A0, A1, A2

These inputs are used to set the last three bits of the I²C address of the device. By using different values for A0, A1, A2, up to eight TPL0102 devices can be used on the same I²C bus.

Figure 3. I²C Interface

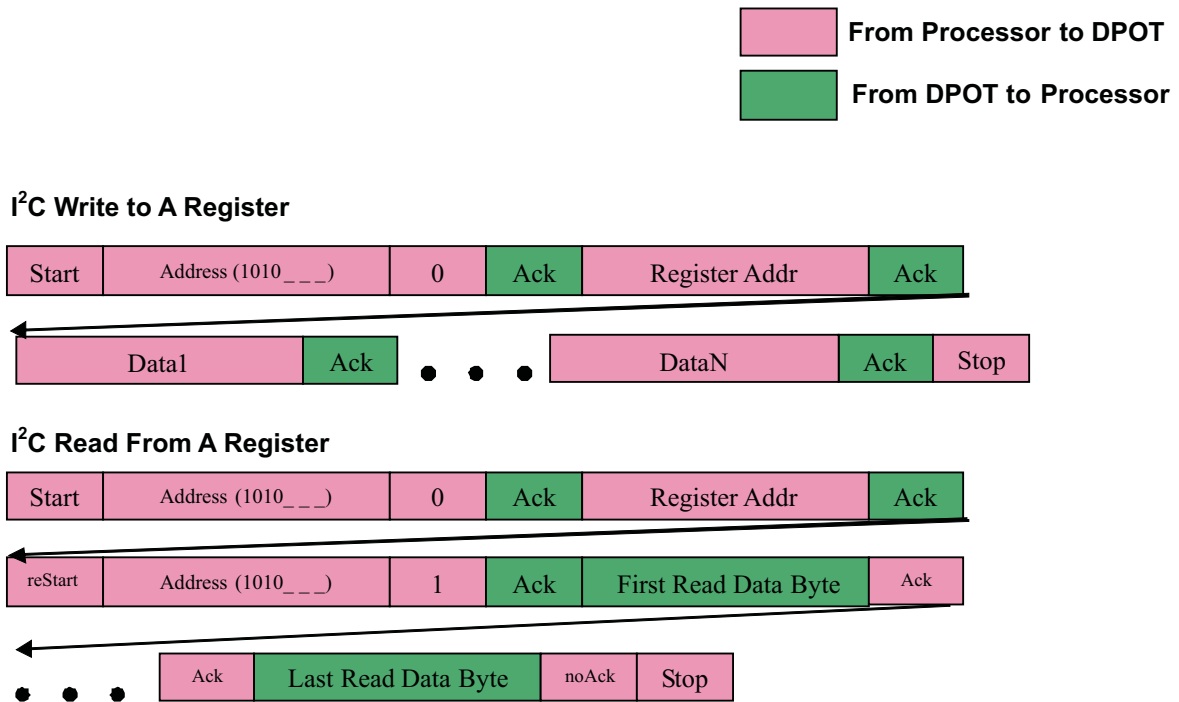

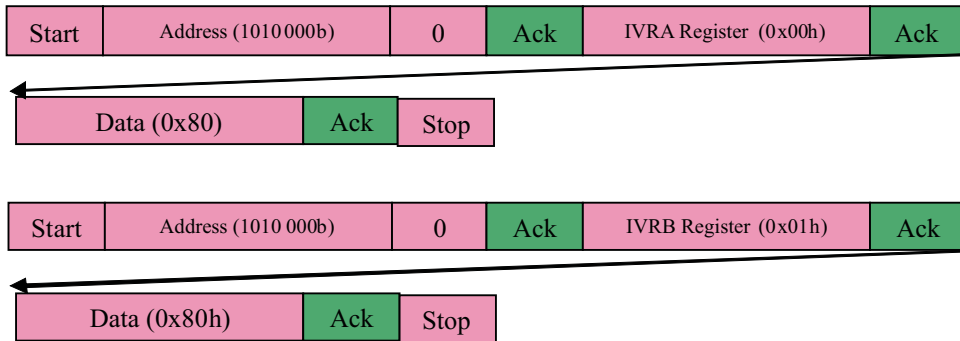

Figure 4. I²C Interface

Following is a sample sequence to set wipers of both potentiometers at mid-scale. Assume A0, A1, and A2 are zero and device has just been powered up.

Method 1: First Write 0x80 to IVRA and then write 0x80 to IVRB Register

Method 2: Perform a multi byte write to IVRA and IVRB Register

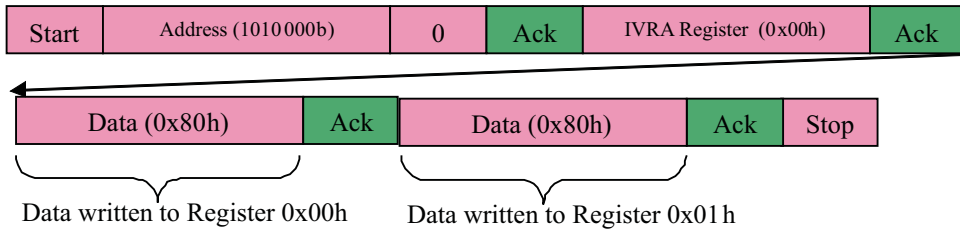

Figure 5. I²C Interface Example

Standard I²C Interface Details

The bidirectional I²C bus consists of the serial clock (SCL) and serial data (SDA) lines. Both lines must be connected to a positive supply via a pullup resistor when connected to the output stages of a device. Data transfer may be initiated only when the bus is not busy.

I²C communication with this device is initiated by the master sending a start condition, a high-to-low transition on the SDA input/output while the SCL input is high (see Figure 6). After the start condition, the device address byte is sent, MSB first, including the data direction bit (R/W). This device does not respond to the general call address. After receiving the valid address byte, this device responds with an ACK, a low on the SDA input/output during the high of the ACK-related clock pulse

Figure 6. Definition of Start and Stop Conditions

The data byte follows the address ACK. The R/W bit is kept low for transfer from the master to the slave. The data byte is followed by an ACK sent from this device. Data are output only if complete bytes are received and acknowledged. The output data is valid at time (tpv) after the low-to-high transition of SCL, during the clock cycle for the ACK. On the I²C bus, only one data bit is transferred during each clock pulse. The data on the SDA line must remain stable during the high pulse of the clock period, as changes in the data line at this time are interpreted as control commands (start or stop) (see Figure 7).

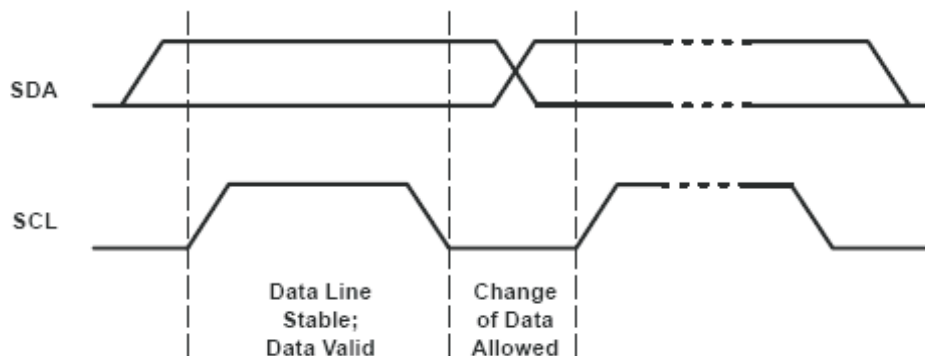

Figure 7. Bit Transfer

A stop condition, a low-to-high transition on the SDA input/output while the SCL input is high, is sent by the master (see Figure 6).

The number of data bytes transferred between the start and the stop conditions from transmitter to receiver is not limited. Each byte of eight bits is followed by one ACK bit. The transmitter must release the SDA line before the receiver can send an ACK bit.

A slave receiver that is addressed must generate an ACK after the reception of each byte. The device that acknowledges has to pull down the SDA line during the ACK clock pulse so that the SDA line is stable low during the high pulse of the ACK-related clock period (see Figure 8). Setup and hold times must be taken into account.

Figure 8. Acknowledgment on the I²C Bus

IDEAL RESISTANCE VALUES

$$R_{WL} = R_{TOT} \times D/256$$

$$R_{HW} = R_{TOT} \times (1 - (D/256))$$

Where D = Decimal Value of Wiper Code

Below table shows the ideal values for DPOT with end-to End resistance of 100kΩ. The absolute values of resistance can vary significantly but the Ratio (R_{hw}/R_{wl}) is extremely accurate.

Step	Binary	R _{HW} (kΩ)	R _{WL} (kΩ)	R _{HW} /R _{WL}
0	0	0.00	100.00	0.00
1	1	0.39	99.61	0.00

REVISION HISTORY

Changes from Revision A (March 2011) to Revision B	Page
• Added RECOMMENDED OPERATING CONDITONS table.	5
• Added IDEAL RESISTANCE VALUES section.	16

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TPL0102-100PWR	ACTIVE	TSSOP	PW	14	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	-40 to 85	EL-100	Samples
TPL0102-100RUCR	ACTIVE	QFN	RUC	14	3000	Green (RoHS & no Sb/Br)	CU NIPDAUAG	Level-1-260C-UNLIM	-40 to 85	6NH	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE DIMENSIONS

A0	Dimension designed to accommodate the component width
B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers

TAPE AND REEL INFORMATION

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
TPL0102-100PWR	TSSOP	PW	14	2000	330.0	12.4	6.9	5.6	1.6	8.0	12.0	Q1
TPL0102-100RUCR	QFN	RUC	14	3000	180.0	8.4	2.3	2.3	0.55	4.0	8.0	Q2

TAPE AND REEL BOX DIMENSIONS

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Length (mm)	Width (mm)	Height (mm)
TPL0102-100PWR	TSSOP	PW	14	2000	367.0	367.0	35.0

PW (R-PDSO-G14)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
 - B. This drawing is subject to change without notice.
 - C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0,15 each side.
 - D. Body width does not include interlead flash. Interlead flash shall not exceed 0,25 each side.
 - E. Falls within JEDEC MO-153

PW (R-PDSO-G14)

PLASTIC SMALL OUTLINE

- NOTES:
- All linear dimensions are in millimeters.
 - This drawing is subject to change without notice.
 - Publication IPC-7351 is recommended for alternate designs.
 - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
 - Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

RUC (S-PX2QFN-N14)

PLASTIC QUAD FLATPACK NO-LEAD

Bottom View

4208447/C 08/2008

- NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
 - B. This drawing is subject to change without notice.
 - C. QFN (Quad Flatpack No-lead) package configuration.
 - D. This package complies to JEDEC MO-288 variation X2GFE.

RUC (S-PX2QFN-N14)

PLASTIC QUAD FLATPACK NO-LEAD

- NOTES:
- All linear dimensions are in millimeters.
 - This drawing is subject to change without notice.
 - Publication IPC-7351 is recommended for alternate designs.
 - Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.
 - Maximum stencil thickness 0,127 mm (5 mils). All linear dimensions are in millimeters.
 - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
 - Side aperture dimensions over-print land for acceptable area ratio > 0.66 . Customer may reduce side aperture dimensions if stencil manufacturing process allows for sufficient release at smaller opening.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
